

Why did we choose this topic?

We chose this topic because it addresses a pressing environmental issue: flooding. Recent months have seen an increase in natural disasters, including heavy rain and storms that have led to severe flooding. However, weather is not the only cause. Human activities also play a significant role. When we fail to keep our streets clean and allow drains to become clogged, we contribute to the risk of flooding in our communities.

Our goal is to raise awareness about this preventable problem and encourage everyone to take action. By maintaining clean streets and regularly unclogging drains, we can significantly reduce the impact of flooding. Through this advocacy, we hope to inspire our community to be proactive in protecting our environment and preventing future disasters.

Contributions:

Jamisola: He contributed to our project by helping design our Canva copy for the code. Specifically, he designed the last two pages, ensuring they were visually appealing and aligned with our advocacy message.

Oso: She also played a key role in designing the Canva presentation, creating the first three pages with a focus on clarity and impactful visuals. Additionally, she was responsible for preparing our project documentation and providing clear explanations throughout the report.

Lirio: She did the very crucial role of this aa which is the coding.
